

How to make a link to any Registry Number:

This url opens Registry Number 1. All characters starting with “h” and ending with “)” are necessary.

[http://tbird.info/registry/Data_Sheet_list.php?q=\(RegistryNumber~equals~1\)](http://tbird.info/registry/Data_Sheet_list.php?q=(RegistryNumber~equals~1))

For any other RN, just substitute the 1 for the Registry Number you want to see.

You can backwards type on a url, inserting the Registry Number you want to see. Make sure to get the closing parentheses and the curvy character intact.
